The study of iconography is a strong element of a standard art history course, but it lacks an in-depth study of their origins, their meaning, their impact on the development of cultural ideologies, and their appropriation by other cultures. The study of these icons relate to a variety of themes that allow for an interdisciplinary approach to the class. For example, religious/spiritual belief systems are communicated through language as well as a lexicon of icons. These icons then enable the establishment of cultural ideologies that in turn dictate the use or misuse of icons that influence social roles, politics and other cultural aspects of a particular society. We will follow the development and transformation of particular icons across cultures and analyze the manner in which they are received and distributed via works of art and transform into archetypes that are representative of that particular culture.
